

Asset Health Monitoring by Tetra Pak

Your assets are talking.
We help you listen.

Monitoring your assets, such as your Tetra Pak® A3 filling machines, provides you with more data, giving you greater knowledge which benefits your operations.

How? By giving you the required insights to take the right decisions and actions for your specific operating conditions.

New, unique monitoring capabilities on Tetra Pak® A3 filling machines through Asset Health Monitoring

Continuous monitoring of the cutting and sealing function – early detection of developing faults, improved process control, and minimised dependency on operator competence.

Utilities consumption - data is collected automatically across your different lines and plants, which makes it easier to **benchmark and be aware of the impact on your costs and carbon footprint.**

Vibration, pressure, and electrical monitoring of critical functions to reduce risk by early detection of potential issues and enabling maintenance optimisation.

Enable faster – and better quality – troubleshooting through Remote or On-Site Support by Tetra Pak thanks to access to data – enhanced root cause identification, along with detection of recurring issues, based on data and solution validation.

What is Asset Health Monitoring and how does it work?

- 1 Customised sensor kits, user interface, and a secure network setup designed for your Tetra Pak equipment.
- 2 This system analyses data linked to your assets' health and generates notifications automatically.
- 3 We apply our Original Equipment Manufacturer (OEM) expertise to enhance this data and generate actionable insights.
- 4 Access this data securely and evaluate which actions to take based on your assets' health status.
- 5 Our local and global network of experts can then support you through our Service solutions to maximise your operational benefits.
- 6 Monitor your assets across one or multiple plants globally to consistently benchmark your equipment fleet.

Availability

Asset Health Monitoring is available across a wide range of Tetra Pak equipment. All new eligible Tetra Pak® A3 filling machines will come with the AHM solution pre-installed – but upgrading your existing models, if eligible, is also possible. Asset Health Monitoring is available through a range of subscription-based options.
